Hi Kaggler,

Today's Assignment

- 1. Read this tutorial (from Lesson 6 of the Python course)
- 2. Complete this exercise (from Lesson 6 of the Python course)

What You'll Learn

In **Lesson 6 (Strings and Dictionaries)**, you'll learn about strings, which is a data type that is useful for representing human-readable data, such as text. A dictionary is another new data type, that is similar to a list, but with important differences that makes it incredibly useful in its own right.

Happy learning, Alexis
