Hi Kaggler,

Python is one of the fastest growing programming languages. Whether it's data manipulation with Pandas, creating visualizations with Seaborn, or deep learning with TensorFlow, Python seems to have a tool for everything.

This week, you'll cover the fundamentals of the Python programming language, starting from the very beginning.

■ Today's Assignment

- 1. Read this tutorial (from Lesson 1 of the Python course)
- Complete this exercise (from Lesson 1 of the Python course)
- What You'll Learn

In **Lesson 1 (Hello Python)**, you'll get a feel for Python syntax, and learn how to work with variables and do arithmetic in Python.

Once you have completed the assignment above, you're done for the day! You'll get a new email tomorrow with the day's assignment. If you would like to discuss what you have learned, you can reach out to other participants through Discord. If you haven't joined the Discord space yet, use this link to sign up.

Happy learning, Alexis
